

Meeting Report

Semester Project - Celebrity Spotting

Hai-Dang NGUYEN

This report summarizes what was discussed in the first meeting on Wednesday, Oct 17th 2018.

- We decided to follow in one direction until the end of the project, but we could change the method in the middle if we find something better. The direction is building a deep-learning model to automatically recognize celebrity faces in the given videos.
- We committed to have something useful at the end of this project.
- We will have meeting weekly but the second meeting will be in the week of Nov 6th.
- In the next two weeks, we will study and try running the DLib library in Face Detection along with the three popular models in Face Recognition, which are FaceNet, OpenFace, and DeepFace.
- We need to find a common available time of all members for the next meetings. In my case, I am available on Monday afternoon, Wednesday, Thursday afternoon, and Friday.
